Marcel Lecomte (Belgium) has just published the sixth edition of his book on fungal microscopy. This work was done voluntarily for the full benefit of the AMFB (Association des Mycologues Francophones de Belgique), which covered the printing costs.

This book has 260 pages. It is presented with a metal ring binding so that it can remain open to the chosen page without risk of crushing and breaking as happens with a glued back. It has been translated into English by its author.

This text presents mycology microscopy starting with theoretical considerations about the microscope, choice of material, different types of preparations, cutting techniques and photography.

Then, all Fungi and their specificities microscopy are discussed (Ascomycetes, Basidiomycetes, Aphylophorales) and all types of staining.

To consult the table of contents see this link: <http://www.amfb.eu/Index/Lecomte4.html>

Order form to send in pdf format to mlecomte@skynet.be
Or by post to **Marcel LECOMTE, rue Basse Chaussée, 117 - B-5022
COGNELEE/NAMUR**

The author will contact you regarding payment terms.

Postal charges

For Belgium: + 9,00 €

For other countries, contact the author (mlecomte@skynet.be), because they are very high for countries outside the European Community. Also, it is better to make group orders.

E.g.: for England: charges for one book = 18,00 € - for eleven (11) books : charges = 76,00 €
